# 2024

**BUILT TO ENDURE.  
WATERPROOF.  
MADE IN GERMANY.**

**+ INSIGHT:**

# WATERPROOF. NO COMPROMISES.

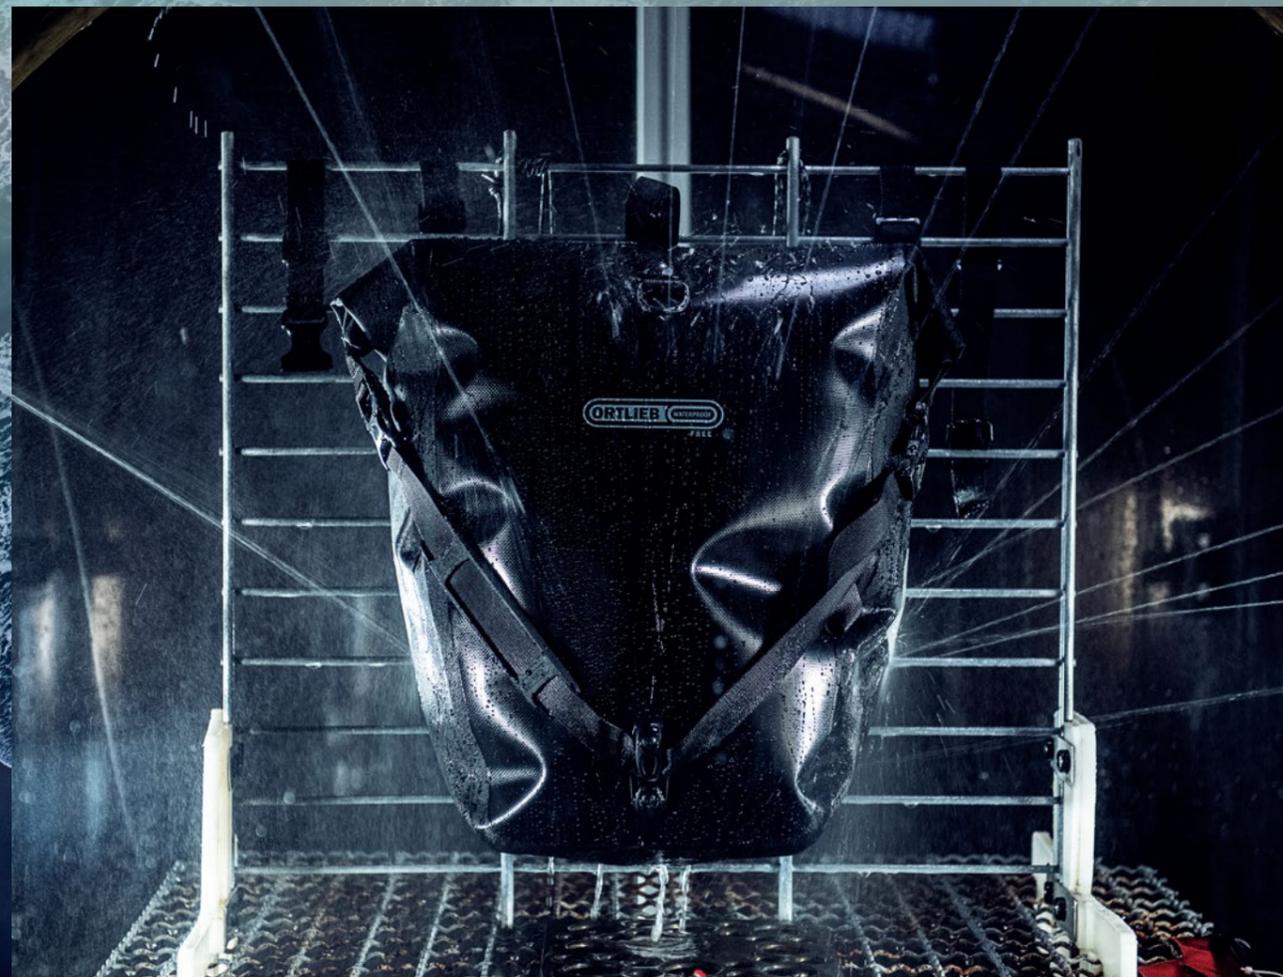

**WE DON'T JUST MAKE PROMISES, WE KEEP THEM — EVEN IN EXTREME CASES AND THROUGHOUT A PRODUCT'S LIFETIME.**

To make a truly waterproof product, you have to do more than just sew together waterproof material, tap the seams and provide the whole thing with a closure.

Back in the early 1980s, we at ORTLIEB also started with the sewn products. For a tight closure, the seams were then internally taped, which is still common practice at many manufacturers today. But stitched elements are always a weak point in bags, backpacks and other equipment because the thread perforates, and thereby damages the material. At ORTLIEB we were never quite satisfied with the result of the sewn bike bags and soon said goodbye to this construction. For longterm and intensive use, this kind of "waterproofness" simply wasn't good enough. That is why in 1984 our founder, Hartmut

Ortlieb, introduced the so-called high-frequency welding technology. With this technique, the material is seamlessly welded together, and the additional tape, used in sewn products, is no longer necessary. The welded seams are at least as robust and waterproof as the material that surrounds them. As a result, the products made with this special technology - including the seams - are waterproof up to 100,000 mm.

**By now, we have almost 40 years of experience with the subject of waterproofness, and we are of the opinion that when something is said to be waterproof, it should be without compromise. And there is no better way than the industrial high-frequency welding technology.**

Products like the Atrack have the IP67 classification, which means that the backpack is completely water-tight for half an hour at a depth of 1 meter.

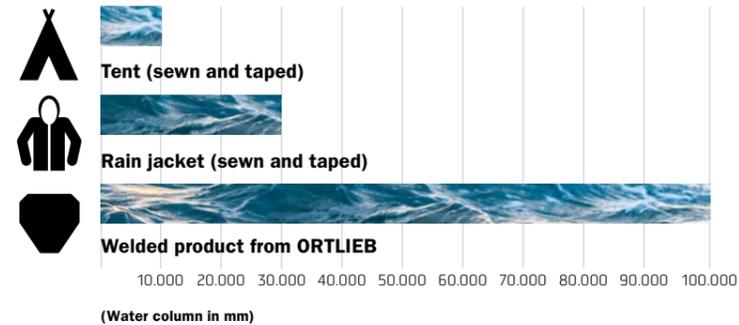

The manufacturing technology is special at ORTLIEB and it's what makes us the number one in the field of waterproof bags and backpacks in the outdoor and bike sector. The roll closure, now a common feature on countless fashion bags and backpacks, also originally came from ORTLIEB and was invented by our founder Hartmut Ortlieb.

But ORTLIEB would not be synonymous for waterproof equipment if our roll closure did not offer the highest level of protection class against moisture. The type of closure is an important factor for a bag's overall level of water and dust tightness. That is why, in addition to the roll top closure, our range of products also have other types of closures such as lid closures and waterproof zippers. All ORTLIEB products are rated and classified by the international IP standard.

The degrees of protection designated as IP (= Ingress Protection) originally come from electrical engineering and indicate the degree of water and dust tightness of a product. The highest protection class that we offer is IP67, these are products with a waterproof zipper from TIZIP®, such as the backpacks from the Atrack family or the Duffles. Because we believe that when a manufacturer claims that its products are waterproof, then they should actually be waterproof.

**That is waterproof without compromise!**

**COMPARISON OF WATERPROOFNESS BETWEEN SEWN AND WELDED:**

The welded products from ORTLIEB can withstand the high demands on waterproofness.

**WE RATE OUR PRODUCTS ACCORDING TO THE IP CODE:**

- IP\_3** protected against spray water (max. 60° to the vertical)
- IP\_4** protected against splash water coming from all directions
- IP\_5** protected against dust, slight penetration of dust possible
- IP\_6** dust proof, no penetration of dust
- IP\_7** protected against penetration of water during temporary immersion; depth: 1 meter/39 inch (lower edge of product); duration 30 minutes

**Example:** Back-Roller Classic: dustproof level 6 + waterproof level 4 results in the classification: IP64

# TRUE STORY.

## ORTLIEB SUSTAINABILITY.

### + INSIGHT:

Our story is a true one. Born from the wish to develop durable, "indestructible" products, since 1982 our guiding principle and mission have been to get the best results for people and the environment. The concept of "sustainability", which first emerged in the 1990s and has really become in vogue during recent years, is part of our DNA. We are not jumping on the bandwagon because it's cool. In short: ORTLIEB has always been genuinely sustainable.

# TRUE? TRUE.

### REALLY? YES INDEED!

Genuine sustainability has been a feature of every single one of our products since 1982. Keeping production in Germany? Is what we have always done. Durability? Is what makes our bags and backpacks so unique. Repair rather than disposal? That's what we've been doing for more than 40 years. And with 18,000 repairs per year, we are true world champions in this discipline. This is precisely why the suitability of every single product for repair has top priority in each new development project. Selling new products is something everyone can do. We at ORTLIEB want your bags and backpacks to become true companions for decades.

### MORE INFORMATION:

[WWW.ORTLIEB.COM/DE\\_DE/SUSTAINABILITY](http://WWW.ORTLIEB.COM/DE_DE/SUSTAINABILITY)

### OUR AIMS

We pursue these goals by considering that it makes economic sense and is really sustainable because this is the only way to make an impact in the long run.

#### 01

To increase the proportion of regenerative energy that we produce ourselves from one third – today's level – to 100% on the balance sheet by the end of 2025.

#### 02

To not only become actually independent in energy terms by the end of 2030 at the latest, but also to produce more regenerative energy than we need ourselves.

#### 03

To provide transparent communication of the CO2e footprint as from 2023 and the life-cycle analysis as from 2025 for all products and to reduce both of them to zero where possible by the end of 2030.

#### 04

To use sustainable materials for our products and to promote further extension of the life cycle principle in the form of long-lasting and repairable products.

## BECAUSE IT IS IN OUR CONTROL

We're never satisfied with the status quo. Or simply use compensation payments to clear our conscience. That's something anyone can do. We want to be even better, achieve more, react more sustainably. And report openly and honestly on how and what we do to achieve the goals we have set ourselves. We do of course wish to make an even greater contribution to the advancing climate change. The path to choose can only be to avoid emissions rather than pay compensation. After all, this is only way to really set things in motion.

Our actions are guided by the UN sustainable development goals. The focus here is on the targets of "affordable and clean energy" and "responsible production and consumption".

**"OUR PRODUCTS SURVIVE EVEN YOUR WILDEST ADVENTURES. BUT IF SOMETHING WERE TO BREAK, OUR SERVICE TEAM STRIVES TO GIVE YOUR BAG A SECOND LIFE."**

[CUSTOMERSERVICE@ORTLIEB.COM](mailto:CUSTOMERSERVICE@ORTLIEB.COM)

**PLEASE REFER TO OUR WEBSITE FOR INFORMATION ABOUT ALL OF OUR SPARE PARTS: [WWW.ORTLIEB.COM](http://WWW.ORTLIEB.COM)**

## A LONG WAY TO GO...

Authentically sustainable for us also means facing up to our weaknesses in an open and honest way and being able to speak about them. Whether it be the disposal of PVC, stitched panels from Asia or even the isolated use of plastic packaging. These are all issues that we can and want to improve, some things may only appear sustainable for our environment at first glance while others are not

yet technically feasible. What's more, any particular measure has to make economic sense without resulting in a price that is out of all proportion for our target group. There is a lot to improve, to set in motion and to optimize, if you have any questions or comments, please get in touch with us.

+ INSIGHT:

# ORTLIEB QL-SYSTEMS

**WHEN IT COMES TO THE SAFE AND QUICK ATTACHMENT AND DETACHMENT OF BIKE BAGS TO THE BIKE, THERE IS NO BETTER WAY THAN THE QUICK-LOCK SYSTEMS OF ORTLIEB.**

The range of mounting systems is (almost) as diverse as the range of ORTLIEB bags. There's a mounting system designed and purpose-built for every bag's intended use and user demand. For some, it is important to attach and detach their bag quickly to their bike, others want to carry their bag over their shoulder, and some even want both. Or perhaps, when the goal is to venture off-road, it's the stable and secure attachment that trumps all needs. Of course, the bag's position on the bike is also important, and has a decisive

influence on the functions of the mounting system. Of course, we no longer use the hooks from the hardware store that our founder Hartmut Ortlieb used for his first bags. Our engineers and designers have developed a large number of mounting systems over the past almost 40 years, many of which are now patented and have received many accolades. That's engineering made in Germany.

## QUICK-LOCK3.1

The QL3.1 was specially developed for the office and city bags. In this system, the necessary (1) attachment components are mounted on the bike luggage rack instead of the bag itself, allowing these bags to be free of any protruding hooks and thereby significantly improving the (2) wearing comfort of the bag. The bag is (3) quickly and reliably attached and removed from the rack using a lateral swivel movement. The standard hardware is made to fit luggage racks with the common tube diameter of up to 10 mm. However, additional mounting hardware for racks with larger, 11 to 14 mm diameter tubing is available separately (item no. E190). As an alternative mounting option, ORTLIEB offers the luggage Rack Three (item no. F78103), in which the bag is attached directly to the laterally integrated mounting points. QL3.1 is used in many office bags, the Back-Roller Urban and from 2021 onward, the Back-Roller Free.

QL3.1  
system

## QUICK-LOCK2.1

QL2.1 is the universal bike bag holder for touring bags and many other models. This innovative system enables attachment to almost all standard bicycle (1) luggage racks. Standard design fits tubing up to 16 mm, but hooks to be used with 18 mm (item no. E211) or 20 mm (item no. E193) diameter tubing are also available. All mounting devices (2) can be adjusted without tools and are easily replaced in case of damage. ORTLIEB also (3) offers an anti-theft device, which is integrated in the upper rail.

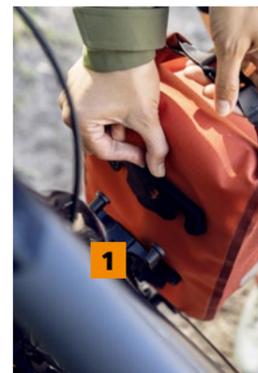

QL2.1  
system

Anti  
scratch

## QUICK-LOCK S

The Quick-LockS holder is ideal for smaller bags, be it for a front fork on a bike (1). This newly developed system (S = small) is characterized by its compact design. The minimalist bracket is securely attached either by a direct mount or by means of two metal strips (on tubing with a diameter of 30-42 mm). With one click (2), the bag snaps in at lightning speed and can be removed just as easily. The Quick-LockS is used for the first time on the ORTLIEB Fork-Pack.

QLS  
system

## TOP-LOCK

The luggage rack, and its support surface in particular, has become the hot spot of the bicycle — no place is more competitive. Whether trunk bags or baskets, everything should be easy to attach and remove as quickly as possible. This is no problem for the universal Top-Lock (TL) adapter from ORTLIEB. Once precisely fitted to the luggage rack width (1), the bag or basket snaps in perfectly and reliably with just a little pressure. Special knobs (2) and non-slip inserts on the underside of the bag prevent any movement. Pressing one of the two release levers (3) on the left or right is sufficient for quick removal.

This system is compatible with almost all luggage racks with a continuous width of 80-160 mm and a tube diameter of 8-16 mm, and is currently used for the E-Trunk, Trunk Bag RC and Up-Town Rack.

TOP  
LOCK

## BAR-LOCK

A new mounting system, the Bar-Lock, enables you to attach and remove the Handlebar-Pack QR (Quick Release) in no time at all. Attaching the bag involves tensioning the grey cord (1), then guiding and locking it around the handlebars and stem. This initially attaches the bag. Now the black cord (2) with the quick release fastener (3) is placed around the stem and handlebars in the opposite direction to the grey cord and then adjusted in length. Closing the quick release fastener fixes the handlebar bag firmly in place. Thanks to the Bar-Lock cord mounting system, the bikepacking bag remains stable and secure on the handlebars even on rougher terrain.

## PANNIER STABILIZING INSERT

Insert for stabilizing a Back-Roller, Bike-Packer or Bike-Shopper so that it retains its shape when empty and remains upright. The padding provides more safety for the contents of the bag. The bright fabric also makes it easier to identify the contents at the bottom of the bag.

## RETROFIT KIT FOR PANNIER STABILIZING INSERT

The Retrofit Kit allows a Pannier Stabilizing Insert to be used in Back-Rollers, Bike-Packers and Bike-Shoppers dating from 2023 or earlier.

**+ BIKEPACKING:**

**NEW COLORS**

Bikepacking is synonymous with freedom: on the move with no ties, independent of route and weather, free choice of bike for your ride. Back in 2016, we started offering our waterproof and made-in-Germany Bikepacking line, and the product range has been growing continuously ever since. This means you can always put together the perfect combination of bags for your own individual adventure and be sure of having all the important things you love securely stowed on the bike whenever you need them. Now we're pleased to announce that we can offer an additional color option for the bikepacking bags and give you a more flexible choice of colors for your bags.

TECHNICAL INFORMATION

\* Food grade coating  
 \*\* Phthalate-free: For several years now, ORTLIEB has been using non-phthalate plasticizers to produce its PVC-coated fabrics. In response to health and environmental concerns, non-phthalate plasticizers are also commonly used in the production of medical devices, children's toys and food packaging. Non-phthalate plasticizers conform to the OEKO-TEX® Standard 100 for textiles.

	New	★	Feature/Special		Depth		Circumference
	Update	↕	Height		Volume		Diameter
	Material	↔	Width		Weight		max. payload

PFC-free: Perfluorinated compounds (PFCs) are man-made chemicals with a wide range of industrial applications. For instance, they are commonly used to give waterproof and stain-resistant properties to textiles. However, owing to their exceptional stability, PFCs are non-biodegradable and bio-accumulative when introduced to the environment. As such, they are regarded as hazardous to human health. As of 2020, ORTLIEB will only produce fabrics that are free of PFCs.

BPA-free: All ORTLIEB products are BPA-free.

**IP STANDARD FOR WATER PROOFNESS AND DUST PROOFNESS FOR ALL ORTLIEB PRODUCTS ACCORDING TO EN 60529\***

	protected against spray water (max. 60° to the vertical)		protected against splash water coming from all directions		protected against penetration of water during temporary immersion; depth: 1 meter/39 inch (lower edge of product); duration 30 minutes
	protected against dust, slight penetration of dust possible		dust proof, no penetration of dust		

\*\*\* the products were classified according to the guidelines by DIN VDE 0470-1 and EN 60529 (published by TÜV Rheinland, Germany).

**Example:** Back-Roller Classic: dustproof level 6 + waterproof level 4 results in the classification: IP64

Note for IP 53, 54, 64:  
 If the product is completely submerged, water can penetrate through the closure.
